Digitized by the Internet Archive  
in 2016

As each new census report has indicated a steady rise in Pennsylvania's population, there has been a disproportionately larger increase in the patient population of our public and private mental institutions. Increased bed capacity and additional facilities of all types have become mandatory in order to relieve a situation which was had ten years ago and has been steadily growing worse.

This problem presents a definite challenge to governmental agencies charged with the responsibility of successfully administering Pennsylvania's mental health program. The task of government in this issue is clearly delineated. We must provide the best of treatment and care to those who come into our institutions and at the same time we must throw full weight behind programs of prevention--prevention of the conditions that bring about the need for these mental institutions.

Pennsylvania is proud of the headway it is making in the field of prevention of mental illness. We will soon occupy a new psychiatric hospital at Pittsburgh which will be the center for intensive study and research into selected types of mental sickness, with a view toward locating causes and cures. We have great hopes for important results from this research center.

In laying plans for continuation of our mental health program we must base our forecasts on accurate information. Studies in all phases of mental illness--types, ages, marital condition, economic condition, environment--give us the primary approach to the problem.

The information in this book represents the data from which we obtain the necessary findings for continuation of the advanced mental program in the Commonwealth.

E. Arthur Sweeney  
Secretary of Welfare

In the presentation of the statistics of the mentally ill and mentally deficient in Pennsylvania, it is thought advisable to point out several significant changes in the decline or growth of the number of patients in the State institutions.

From the first graph shown in this book it will be noticed that during 1937 and 1938 there was a decrease in the aggregate population of the State institutions. That decrease can be directly attributed to the curtailment of admissions, prompted by an acute, overcrowded condition. The extraordinary rise in the 1939 bar was caused by the acceptance in October, 1938 of the Philadelphia Hospital for Mental and Nervous Diseases, a County institution, as a State institution--now the Philadelphia State Hospital. Likewise the decrease in the County Mental hospitals aggregate population on May 31, 1939, shown on the graph on page 30, is traceable to the same factor.

May it also be stressed that the constant growth of the number of mentally ill and mentally deficient in the various institutions should not be interpreted as an increasing demand on institutional treatment and facilities by the people of this Commonwealth.

The Division wishes to acknowledge and thank Dr. Harry S. Hoffman, Assistant Superintendent of the Allentown State Hospital for the assistance and cooperation he has given in the preparation of this publication.

LeRoy C. Schaeffer  
Supervisor  
Research and Statistics

# STATE INSTITUTIONS FOR MENTALLY ILL AND MENTALLY DEFICIENT INCLUDING DIXMONT & ELWYN POPULATION ————— MAY 31 1922 ——— 1939

## BUREAU OF MENTAL HEALTH

The annual statistical compilations in regard to mental patients in Pennsylvania have been developed to the extent that this, the Fifth Annual Report, appears for the first time as a separate publication related to the Bureau of Mental Health. As in former reports, the tables and charts are in reference to the State owned mental hospitals, institutions for mental defectives and epileptics; two private State aided institutions, one for the mentally ill and the other for mental defectives; and the twelve licensed county mental hospitals.

As indicated in former reports, the tables presented do not by any means represent all the available information in the Department of Welfare concerning mental patients. Through mechanical tabulation of the coded and punched cards of individual patients, almost any combination of statistical data is possible. The tables selected for publication are those believed most likely to illustrate the extent of the problem and to make it possible to compare similar activities in other States.

In connection with many of the statistical tables, brief comments have been made, pointing out some of the more striking ratios and percentages. Among the first admissions to the mental hospitals, certain diagnostic groups continue to merit special comment. Dementia Praecox is still the single largest group and one which has formed the principal percentage of the continued treatment or chronic cases. The so-called shock treatment, utilizing insulin and/or metrazol, still experimental and not universally in favor with psychiatrists, has encouraged some hope of better prognosis in some of these cases.

The syphilitic meningo encephalitic group should eventually be reduced in number, it is hoped, as a result of the drive for earlier and more energetic treatment of cases of syphilis in the community.

As in other States, there is a gradual increase in the number of old people entering the hospitals. This is probably in keeping with the advancing average age of the population, but it places on the hospitals a perhaps unnecessary burden of custodial care, many of the old people needing only kindly supervision and protection and not the more costly facilities that should be available in every mental hospital. Family care or boarding out of suitable patients may eventually be a partial solution of the overcrowding in this particular department of the hospitals.

In contemplating the death rate in the hospitals, the percentage of those admitted at an advanced age should be taken into consideration.

Although there is a long waiting list to the institutions for mental defectives and epileptics, yet a considerable number are admitted annually, which will surprise many of those who are discouraged by the tradition that few if any are accepted (see table XXI, page 27).

Compilations of this type are important in so far as they represent the careful work of the staff members of the cooperating institutions. Thanks and appreciation are hereby expressed to all who through their constant attention and faithful compliance with the regulations have made this compilation possible. Special acknowledgement is also due Dr. Harry F. Hoffman, Assistant Superintendent and Clinical Director, Allentown State Hospital, who participated in the study of the statistics and the preparation of the various comments.

TABLE 1

Patients discharged as recovered are 11% of the number admitted (exclusive of transfers) and 2% of the total under treatment. Comparable percentages from the 1936 U. S. Census for all state hospitals are 15 and 2%. Those discharged as improved from Pennsylvania state hospitals are 30% of admissions and 4% of total treated, corresponding U. S. Census figures being 25 and 3% respectively. These figures indicate that we are more conservative in reporting patients as either recovered or improved. By combining the recovered and improved groups into "total benefited" Pennsylvania has 41% and total U. S. has 40%.

However when we compare deaths we find a distinctly higher death rate in Pennsylvania, where deaths are 37% of the admissions (exclusive of transfers) and 5% of the total treated, the comparable percentages for all U. S. state hospitals being 26 and 6%.

First admissions plus readmissions make up 13% of the total number treated in Pennsylvania state hospitals as compared with 25% for all the state hospitals of the United States.

Patients on parole make up 12% of the number in the state hospitals on May 31, 1939 and 11% of the total then in the books.

TABLE 11

Although diagnostic classification is of less importance than an understanding of mental mechanisms and the application of adequate psychiatric treatment, statistics do give us means of comparisons and do indicate trends.

Psychiatric diagnoses of 2909 first admissions to the state mental hospitals of Pennsylvania, arranged in order of frequency show that 10 diagnostic groupings make up 82% of the first admissions. For comparison the percentages of the same diagnostic groups for United States mental hospitals first admissions taken from U. S. Census reports for 1936 appear in the second column.

12 who died during the Fiscal Year, it is very interesting to observe that 31% were 70 years and over, particularly when this figure is compared with the Age Groupings at time of admission and when compared with the total duration of hospital life of patients dying in the State Mental Hospital. See Tables XII and XV.

GRAND TOTAL	1427	732	695	1413	707	706	1102	546	556	1048	532	516	815	435

Based on the age at time of admission, it will be observed that 25% are between the ages of 25 and 35. 5% were under 20 years of age.

The age groupings were the ages at time of admission. During the period of institutionalization the psychoses of some of the individuals has changed. This, we hope, will explain the prevalence of similar psychoses in some of the lower age groupings.

The picture presented in the following pages is not too encouraging. The record is plain, as only statistics can be plain. Increasing prison populations, a noticeable upsurge of younger men in the crime news and a dangerous increase in the average population of the county prisons of Pennsylvania can only mean one thing. There is need, now as never before, for a complete overhauling of the Commonwealth's diverse machinery for combating the eternal crime problem.

In any curative procedure, the successful physician first makes complete diagnosis, checking all possible factors contributing to the ailment of his subject. Similarly, it is the aim of the Department of Welfare, through careful use of material furnished by the Division of Research and Statistics, to order its program in such a way as to combat the trend for the betterment of society.

It is only through such studies as are summarized in the following pages that a clear understanding of the crime situation can be obtained and the basic groundwork laid for counter-offensive. As a case in point, it is to be noted that of first admissions to State penal institutions during the year ended May 31, 1939, only 15% were trained for the trade or professional work. Here is a warning signal to educators to reconsider present methods.

It is the hope of this Department, in making public this statistical information, that it will be further studied and used by jurists, penologists, writers and all those interested in giving Pennsylvania a crime prevention program second to none.

E. Arthur Sweeney  
Secretary of Welfare

# STATE INSTITUTIONS PENAL AND CORRECTIONAL POPULATION MAY 31 1923 — 1939

PENITENTIARIES ■  
CORRECTIONAL SCHOOL □ INDUSTRIAL SCHOOL ▨

## BUREAU OF CORRECTIONS

The Bureau of Corrections presents the Statistical data as compiled by the Research and Statistical Division of the Welfare Department for the year ending May 31, 1939, together with charts of the State Penal and Correctional Institutions with respect to the 67 County Prisons, the Workhouse, and the House of Correction of the Commonwealth of Pennsylvania.

It will be noticed in the table on page 4 that there is an increase of 138 individuals in the total population of the State Penal Institution for the year ending May 31, 1939. All of the institutions show an increase except Pennsylvania Industrial School, where there has been a reduction of 121 boys. The largest increase was in the Eastern State Penitentiary which showed a gain of 121 men in comparison to a gain of 83 men in the Western State Penitentiary, and 55 women in the State Industrial Home for Women. This continued rise in population is influenced to a large extent by a general unemployment condition. Idleness contributes not only to the number of new commitments that are received but it also reduces the number of men who can be released on parole. According to the requirements for parole in the State of Pennsylvania, after a man has received favorable recommendations by the Board of Trustees of the Institution, the Board of Pardons, and the Governor of the State, it is necessary for him to present a satisfactory parole plan before he can be released. In the majority of cases, definite promises of employment is part of this plan. The inability to secure such employment prevents release on parole and consequently there are a number of men being held in the institutions who cannot meet this requirement for their release.

In order to reduce the overcrowded condition in the State Penitentiaries, it is frequently necessary for the department to arrange transfers to the County Prisons. This especially is true in the case of the Eastern State Penitentiary. All men who are considered for transfer are studied thoroughly and interviewed personally by representatives of this department. The complete copy of the man's classification record along with a statement of his behavior in the institution is forwarded to the County Officials. After the approval of the Courts and the County authorities is secured the transfer is made.

The continued decrease in the age of the men received in the State Penitentiaries is making more complicated the problems confronted by those institutions. For example, it will be noted in the chart on page 22 that in the Eastern State Penitentiary and the Western State Penitentiary, 1383 new commitments were received during the year ending May 31, 1939. Of this number 153 men were under 21 years of age and 277 were between 21 and 24 years of age making a total of 430 men under 25 years of age. In other words, approximately 1/3 of the total number of men received in the two penitentiaries were under 25 years of age. This startling picture of the number of youths involved in crime, emphasizes two facts.

First - Every effort would be utilized in our State to encourage a worthwhile program of crime prevention.

Second - It is very necessary to maintain in the penitentiaries a constructive program of rehabilitation so that these young men will benefit by their imprisonment and not become hardened criminals.

Again it is interesting to observe the educational background of individuals committed to the State Penal Institutions. For example, table on page 5 shows that 12.6% of all new commitments during the year ending May 31, 1939 did not go beyond the 4th grade in school and of that group 1.1% never attended school. When this fact is compared with the figures which show that only 15.5% of the new commitments have definite training for industry, trade, or profession, the importance of education as a means of helping to reduce crimes is emphasized. We are pleased to note that educators are becoming aware to an increasing degree of this fact and are making studies for the purpose of trying to discover what can be done to improve this condition.

It is significant that the table on page 17 shows that of the 2,485 new commitments to State Penal Institutions during the year ending May 31, 1939, 1,731 of the individuals were single. This figure is naturally affected to some extent by the presence of commitments to the Pennsylvania Industrial School. Because of their age a smaller number of inmates are married. However, these figures again stress the importance of the home in our society. In all criminal statistics, it is noticed that there is a greater tendency for single individuals to get into trouble. It is also very apparent that a large number of inmates in State Penal Institutions come from broken homes.

It will be observed in the Table on page 5 that approximately one-half of the individuals who were committed to the State Penal Institutions during the year ending May 31, 1939 had histories of previous commitments. Of the new men committed to the Eastern State Penitentiary, 69.4% had previous criminal records and 30.6% had no previous institutional experience. The figures are somewhat different for the Western State Penitentiary where only 34.8% had previously been committed and 65.2% had no record of commitments. It is surprising to note that Pennsylvania Industrial School 43% had previously been in institutions and 57% had not. The lowest percentage of previous commitments is in the State Industrial School for Women where only 23.7% had previous experience in institutions and 76.3% had no record of previous incarceration.

Two deductions can possibly be drawn from these figures.

1. That the men in the Eastern State Penitentiary as a general rule have engaged in more criminal activities prior to commitment than the inmates received in the other state institutions.
2. Since Pennsylvania Industrial School reports such a high percentage of young offenders having previous institutional experience, it calls to the attention the possible necessity of making a close study of the method of handling juvenile delinquents in order to try to reduce their subsequent criminal activities.

The table on page 61 which states the number of inmates trained in prison industries is encouraging because it shows that there continues to be a gradual increase in the number of inmates employed in Prison Labor Shops. However, when the figure of 1536 representing the total number employed in all the institutions is compared with the total population of 6998, it can be seen that a very small per cent of the inmates are employed in production work. Of course, a large number of inmates in all institutions are employed in

maintenance work. This, unfortunately, does not furnish employment for the total population. One of the most pressing problems in our Penal institution is that of idleness. The old statement that "an idle mind is the devil's workshop" is multiplied many times when "that mind" is behind prison walls.

Few people realize the number of individuals who are received in the County Prison and House of Correction in our State. By observing the table on page 57 it can be seen that during the year ending December 31, 1938, the average daily population was 7874 and during the year ending December 31, 1938, the average daily population was 8438 or an increase of 564. This represents only the average daily population and it must be remembered that thousands of different individuals pass through these institutions during the year.

Since the County Prison in a majority of cases is the first institution which the prisoner encounters, it is necessary to maintain an efficient program if constructive results are to be attained. The Department of Welfare is greatly interested in helping the County authorities with their problems. Intelligent interest of the local communities in their County Prisons will greatly assist the officials of those institutions in improving their work.

It would be possible to go on at great length pointing out significant facts in the tables and charts prepared by the Research and Statistical Division. Therefore, this report makes mention of only a few facts which seem to have unusual significance.

Ira C. McCloskey  
 Director  
 Bureau of Corrections

#### PRISON LABOR DIVISION

Each year approximately 2500 men and women are released or paroled to their respective home communities from Pennsylvania State Penal and Correctional Institutions. It is the function of the Prison Labor Division to teach these men and women useful trades prior to their release, to establish habits of industry; to eliminate, as far as possible, the demoralizing effects of idleness in prisons, and to reclaim the largest possible percentage of those released as a useful and industrious part of society.

The Prison Labor Division receives no State appropriation for this program but must operate Prison Industries so efficiently that the Division is maintained on a fully self-supporting basis through the sale of products to tax-supported institutions and agencies. The sale of these products on the open market is prohibited by law.

All leading penologists have approved Pennsylvania's Prison Industries first, because a sound and sensible prison program requires a minimum of idle prisoners and secondly, because this system compels prisoners to pay a portion of the costs they impose on the rest of society. Pennsylvania inmates produce for use while in prison many of their own requirements as well as those of inmates or patients in other state-owned institutions.

The table which follows shows the various Prison Industries operated by the Prison Labor Division and the number of prisoners given trade-training employment in each industry during the past six fiscal years. During this time the number of prisoners employed and trained has increased over fifty per cent.

F. Herbert Cooper  
Acting Superintendent  
Prison Labor Division

COMMONWEALTH OF PENNSYLVANIA

FIFTH ANNUAL STATISTICAL  
REPORT

*of the*

Department of Welfare

**E. ARTHUR SWEENEY**  
*Secretary*

1939

Bulletin No. 80

Section C

The wide field served by the Bureaus within the Pennsylvania Department of Welfare necessitates constant compilation of various data. Population trends, operation cost figures, budget information and many other similar projects require accurate, factual reporting.

This information is basic in evaluating the various services charged to the responsibility of this Department. Without such data, clearly and accurately assembled, we would be severely handicapped in establishing programs and policies.

This report embodies much of the statistical information which defines the present course of the Pennsylvania Department of Welfare. The figures have been obtained from many agencies, both public and private. A brief study of the various tables will show the extent of the field covered by these services, and the necessity of good statistical information in a public program such as is here represented.

E. Arthur Sweeney  
Secretary  
Department of Welfare

In this, the third section of the Fifth Annual Statistical Report, the Division of Research and Statistics wishes to point out several additions and changes made in the presentation and compilation of the data.

A definite revision of the forms used in the collection of Day Nursery, Maternity Home, and Children's Institutional Statistics was made during 1938. Two things were paramount in changing these forms. First, the Division endeavored to eliminate the duplications in the aggregate count of the various institutions which had existed prior to 1938. In the majority of instances, this was accomplished. Second, the forms were so designed that they included the material most essential and most helpful to the institutions and agencies primarily interested in the data.

The Division feels that these figures will present the most exact picture of the children under the jurisdiction of the Department of Welfare, without resorting to an individual record card.

In the study for the Council for the Blind on the cause of blindness, there was an increase in the total number of eyes studied from 27,190 in 1937, to 29,782 on December 31, 1939, or an increase of 2,592 eyes. Interesting was the fact that the increase did not manifest itself in any single or small group of cases.

Additional study, made by the Division of Research and Statistics for the past several years, and distributed to the various state-aided hospitals, has been included in the Annual Report for the first time. The analysis of costs in state-aided hospitals classified according to the bed capacity, and showing the relative costs of operation of the hospitals, with and without Nurses Training Schools, has been requested frequently, and has been incorporated in the Report for the purpose of retaining this important analysis for future comparative purposes.

LeRoy C. Schaeffer  
Supervisor  
Research and Statistics

# 1939 - 1941 APPROPRIATIONS

## \$42,888,662

**WHERE THE WELFARE DOLLARS GO**

The Bureau of Institutional Management is responsible to the Commonwealth and thirty state-owned institutions for developing and supervising a program providing clothing, laundry, heat, light, water, farms and general maintenance. Standards or goals of performance are promoted. Key employees are called together for conference on important problems. Monthly summaries of data reflecting efficiency as to food, laundry, farm, hospital, and engineering service records are prepared and issued to all institutions.

#### Dietary

In Table I are shown the figures for basic ration and the data indicating performance at the several institutions covered. The ration is an estimate of the needs of the institution. It is used as a yardstick in judging the adequacy of the institutional food consumption. Figures are based on the total number of people fed.

Decreased milk production in a few institutions has brought the milk consumption as a whole a little below the usual amount. The total food consumption is somewhat less than that of the preceding year. A small decrease in food costs per person, both in purchased and produced costs, is also shown. Emphasis is still continued on supplementing produced foods with purchased foods, particularly in the protective food groups, namely, milk, butter, eggs, fruits and vegetables. This is necessary in the late winter and early spring months when the produced foods are limited to those which have been stored for several months. There is a feeling among the institutions that certain items such as meat, butter, eggs, and fruit should be increased in order to insure -

1. A more adequate allowance for the patients and to safeguard against borderline deficiencies.
2. A more satisfying diet both as to content and variety.

Further study will be made in these items as to the extent of the increase or decrease in other items before additional money is requested for the food budget.

Occupancy of new buildings constructed under the General State Authority program has been delayed due to lack of equipment. The need for more adequate facilities, as far as dietary departments are concerned, is becoming more and more acute.

Institutional farms comprise more than 25,000 acres of land, which is the area surrounding the seventeen institutions maintaining farm activities. This area provides the respective institutions with protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from the budget available.

Table II shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the assumption that the following products in order, should be produced to the extent that land and other facilities are available: vegetables, potatoes, crops to support the dairy, pigery, hennery and the horses.

After such tilled crops are provided for, or to the extent that tilled land is available, the remaining acreage is planned and maintained for pasture and woodlots.

Employment of patients or inmates is also shown. A total of 1,751 persons are employed in farm activities, with the larger proportion working with the general farm crops and in the gardens. Employment in livestock activities has a very definite and particular value for certain individuals.

Table III shows the efficiency of production by farm activities. It will be noted that institutional results are considerable above State averages. Institutional production could not be considered efficient if this were otherwise. The production of the 16,276 pounds of milk per cow at Rockview during last year leads all other herds, and is outstanding.

In eggs, the production of all of the first nine institutions exceeds 200 eggs per bird. In 1929

three institutions exceeded 10,000 pounds of milk per cow, and in 1939 all farms exceeded that production. In the henery production for 1929, three flocks exceed 150 eggs per bird, while in 1939, none fell below that figure.

It should be noted that with the increased production per cow and per hen, the total amount of milk is almost double that of ten years ago, while the eggs virtually triple the production of that date. Marked improvement is also evident in the general crop production as shown by the index figures.

In Table IV are shown acreage and yields for general farm crops. Every acre of institutional land is planned. After vegetables and potatoes are provided for in accordance with the needs of the institution, the remainder of the land is planned to produce crops needed for the several livestock activities. Every effort is made to maintain or increase fertility and therefore yields.

In Table VII the production of products per capita per day is shown. It will be noted that the majority of institutions goals are being met as to the production of milk and vegetables. Farm planning from year to year should enable those that are low to approach more nearly the desired goals. Inadequacy of buildings and other facilities limit, in a number of cases, livestock production.

#### Laundry

Table V compares the average of the first five bundles with the fifteenth. It will be noted that perceptible improvement is shown in breaking strength loss and in the retention of whiteness. Very marked improvement, (26 per cent) or an improvement of more than one-half better than in the first five bundles, is shown in soil removal. This improvement was evidently due to co-operation of the Department of Textile Chemistry of the Pennsylvania State College under a plan financed on a fee basis through a co-operative effort with the Department of Welfare institutions and those under the Departments of Public Instruction, Health, and Military Affairs.

The improvement has been obtained with virtually the same equipment that was used during the last two years when the first five test bundles were run. This increased efficiency, therefore, has been achieved through the more effective use of all supplies, equipment and general laundry practice. The better quality of work done bears importance not only because of the value of greater efficiency in itself, but also because the work of the laundry relates so closely to the care of patients, satisfaction of employees and general appearance of clothes and linens.

#### Engineering Service

The engineering activities cover all of the many and varied maintenance problems as are presented by the 30 Welfare institutions. These activities include water supply, sewage treatment and disposal, boiler and power plant operation, refrigeration, heat light, etc.

Table        presents the annual per capita costs for the purchase of the basic maintenance commodities, while Table        presents the per capita consumption of these commodities.

It will be noted that coal is the largest single item consumed. The use of coal to provide steam is the backbone of the institutional existence. Expenditures for coal may be translated into the generation of electricity, refrigeration, heat, laundry, sterilization, hot water, cooking and farm activities.

It is gratifying to cite the fact that during the year of 1939, 186,952 tons were consumed as compared to 186,129 tons for the year 1938. This reduction in cost was brought about by the purchase of lower cost fuels.

It must be borne in mind that during this period, fifteen institutions were equipped with new power plants or substantial changes made in existing plants which of necessity disrupted economical and efficient operation. Power Plants of all institutions were required during this period to supply services (particularly heat) to all of the new construction work.

Notwithstanding the slight increase in tonnage consumed, the unfavorable operating conditions and the additional burdens imposed on the power plants, the total coal bill was reduced from \$600,649.08 to

\$561,293.41 in 1939. This saving was made despite a general increase in coal prices.

It is also noteworthy that where institution plants were unchanged, both the tonnage and the cost was higher than during 1938.

#### Hospital Service

By far the largest group of paid personnel employed at state-owned institutions is engaged specially for nursing and attendant services. Increasing study of the care for the 22,000 population in thirteen state-owned mental hospitals only shows how much is yet to be accomplished through such service. The 6,000 patients in institutions for the mentally deficient and epileptic are a close second in similar demands. Ten Medical and Surgical Hospitals operated under the Department of Welfare are comparable to other general hospitals throughout the Commonwealth.

The construction program of the General State Authority is being completed and has provided much needed hospital buildings and facilities for the Eastern State Penitentiary at Graterford, Western State Penitentiary at Pittsburgh, Pennsylvania Training School at Morgantown and the New Pennsylvania Industrial School near Camp Hill. It should now be more nearly possible to develop an adequate health program for the 7500 in State-owned Penal and Correctional Institutions.

The work and program of the Nursing Consultant in this Bureau is not readily reduced to statistics. It is based on just as sound, adequate personal care as budgets and facilities permit. Properly trained and interested personnel is essential and always constitutes a problem in order to be met satisfactorily. Schools for nurses are maintained at four of the Medical and Surgical Hospitals with enrollment of about 40. Approximately 85 affiliate students are enrolled in courses at the Warren and Allentown State Hospitals. These courses are in addition to those provided at certain institutions for attendants.

#### Architectural Services

The Fourth Annual Statistical Report for the Department of Welfare showed the magnitude of the General State Authority Construction Program for institutions operating under the Department of Welfare. Throughout the last fiscal year that program continued to be an absorbing and important one. As buildings for wards, kitchen and dining room, boiler and power plants, laundries, sewage disposal facilities, farm, hospital, storage and other services became realities, equipment needed to complete and operate the related services came to the fore.

Details involved in locating, selecting and developing specifications for the many hundred of types of pieces of equipment can be appreciated only by the Superintendent, the stewards, institutional activity heads and others who spent months of time in that far reaching work. The lists were finally submitted to the General State Authority under 85 groups. Total cost estimates were approximately 1,440,000 for fixed equipment and 970,000 for other equipment. These figures represented results after many revisions and eliminations. They did not include items such as dishes or other articles which are ordinarily replaced in a matter of months or a few years. Such equipment remains to be secured through ordinary institutional allocation of funds.

The work related to the equipment program was shared by other consultants in the Bureau as well as many outside of the Bureau of Institutional Management and the Department of Welfare whose talent proved valuable. In addition to the equipment program a large number of requests for approval of construction at state-aided and supervised institutions as presented were covered. This was in accordance with the administrative code which requires the architectural consultant in the Department of Welfare to approve new construction and major alterations at institutions.

R. Bruce Dunlap  
Director  
Bureau of Institutional Management

TABLE I

ANALYSIS OF THE AVERAGE FOOD CONSUMPTION IN THE  
MENTAL HOSPITALS AND SCHOOLS FOR MENTAL DEFECTIVES  
(OZ. PER CAPITA FOR DAY)  
JUNE 1, 1938 TO MAY 31, 1939

CHILDREN'S CENSUS  
TABLES XI TO XVII

Every year the Department of Welfare makes a census of children who are under the care of child caring organizations, which, in accordance with the provisions of the Administrative Code, are supervised by the Bureau of Community Work.

Tables XI to XVII give the results of the Census for the year ended December 31, 1938. It will be noticed from tables XI and XII that reports are included from 352 separate agencies and institutions and 36 juvenile courts, or a total of 388 organizations having children under care or supervision. For the first time in 1938 reports were included from county institution districts which, on January 31 of that year, became responsible for the care of dependent children - a responsibility formerly carried by 425 poor boards. Nineteen county institution districts reported that they were using exclusively the services of one or more private agency caring for children; the remaining 48 counties are included in the report. Of the 67 county courts responsible for juvenile court proceedings, 31 reported no children under supervision at the end of 1938. Juvenile courts in the other 36 counties submitted reports. With the exception of 2 day nurseries which did not participate, the census is complete, and gives a fair indication of the movement of population during the year, and the number and the whereabouts of children receiving care provided at the end of the year by child caring agencies throughout the State.

According to table XI, 43,541 children were under care at the beginning of 1938; 20,206 children were received into care during the year; 19,643 were discharged from care; 177 deaths occurred, leaving 43,927 children under care at the end of the year. This is not an unduplicated number. From table XIV it will be seen that 4,735 children were presumably reported by two agencies. The unduplicated count indicates that 39,950 children were under care of agencies and institutions, and 6,286 children were under the care and supervision of juvenile courts, making a total of 46,236 children receiving care and supervision at the end of 1938. Table XV shows the race of children under care December 31, 1938. Two large organizations did not provide figures that could be broken down so that this count was not represented in the total number of children reported. Of the children included in this breakdown, 36,463 or about 91% were white and 3,574 or approximately 9% were negro; 23 were listed as "other race."

From Table XII it will be noticed that 21,775 children were receiving care in institutions for neglected, dependent and handicapped children, and 1,830 were in institutions of other types, hospitals, etc; 12,987 children were in foster homes, and 9,256 were in their own homes or homes of relatives under the supervision of various organizations.

Table XV shows the type of foster homes in which 12,987 children were receiving care; 10,604 were in boarding homes; 1,453 in free homes and 581 were in wage homes.

No attempt is made here to interpret these figures. Too many factors are involved which are known only to the individual organizations participating in the census. The figures are given here only as indicating trends and volume of child care throughout the State.

COUNTY HOME POPULATION  
TABLES XXVII TO XXVIII

Figures given in Tables XXVII to XXVIII relate to the population of county homes which also come under the supervision of the Bureau of Community Work in the Department of Welfare. Figures in these tables are tabulated from individual records submitted by county institution districts and include approximately 97.8% of the total county home population. Various kinds of social data contained in the individual record cards are presented in the tables. On January 1, 1938 when the poor boards were eliminated by Act 396 of 1937 the county commissioners, acting as authorities for the institution districts, became responsible in

all counties for persons "requiring public care because of mental or physical infirmity." This group comprised for the most part, the county home population.

Table XXVI relates to the cause of admission to county homes. It will be observed that the reason for admission given in 2,977 cases was old age, and of this number, 1,914 were listed as 70 years of age or above. It may be assumed that these persons are in need of institutional care or were for some reason unable to adjust outside of the institution, and thus were not eligible for old age assistance. 1,862 are listed as unable to find employment. It is interesting to note that the largest number in this classification, 1,228, fall between the 50 to 70 year age group. There were also in this classification 84 persons between the age of 21 and 40, and 143 between the age of 40 and 50 years. The question, how many of this group, admitted to County Homes because they were "unable to find employment" might qualify for public assistance, could be answered only by means of a case by case analysis. The same is true of 2,014 recorded as admitted for "other causes." For the most part other reasons for admission given would appear to come within the definition of a "dependent" (person who is in need of public care because of mental or physical infirmity) who under the county institution district act are the legal responsibility of the commissioners acting as authorities of the county institution districts.

Margaret O. Benada

The law creating the State Council for the Blind places upon it the responsibility for maintaining a Register of blind persons in the Commonwealth. Today the Council's register of the blind contains data of 17,116 persons who are blind within the generally accepted definition of blindness, a visual acuity of 20/200 in the better eye. This number is a proportion of one to every 574 of the State's population, but there is a wide variation among the counties.

A study to determine the causes of blindness has been made and a table is given showing the results of this study. It can be noted that a large percentage of our blind population are blind from remedial or preventive causes.

To develop proper facilities to control blindness from these causes is a present objective of the Council, but funds are necessary to establish an effective program for the prevention of blindness.

The table showing figures on the operation of vending stands by blind or partially seeing persons are results of the cooperative program with the Division of Vocational Rehabilitation of the Office of Education, Department of the Interior, Washington, under the provisions of the Randolph-Sheppard Act passed by the Congress in 1936. These figures indicate the possibilities of employment for visually handicapped persons and show, in some measure, the results of the program in terms of income to those blind men and women to whom the Council has been able to extend its services with its present staff and limited budget.

The third table shows the number of blind persons in the Commonwealth who are experiencing freedom and independence through the use of dog guides. With 91 dogs, Pennsylvania has more than twice as many as any other State in the nation.

Bernice C. English  
Acting Executive Director  
State Council for the Blind

**COUNTY HOMES**  
Population — December 31  
1921 - 1938

# INDEX

	Page
A	
Acresage - Patient or Inmate Employment.....	5
Acresage, Crop - and Total Yields.....	7
Admission, Cause for.....	19
Age Groups.....	16
Analysis of Costs in State-Aided Hospitals.....	20
Analysis of Food Consumption.....	4
Analysis of Hospital Service.....	11
B	
Basic Utility Costs Per Capita Per Annum.....	10
Basic Utility Consumption Per Capita Per Annum.....	10
Blind, Register of by County.....	26
Blindness, Cause of.....	27
Boiler Room Data - Engineer's Report.....	9
C	
Cause for Admission - County Home.....	19
Cause of Blindness, by County.....	27
Census Report of Children Under Care.....	15
Children Under Care	
Census Report of.....	15
In Foster Home.....	16
In Own or Relative Homes.....	16
Race of.....	16
Whereabouts of.....	15
County Home Population	
According to Number of Children.....	17
Citizenship of.....	18
Marital Condition of.....	18
Nativity, Race and Sex of.....	17
Previous Residence of.....	18
Religion of.....	18
Costs in State-Aided Hospitals, Analysis of.....	20
Costs of Operating State-Owned Institutions, Statement of.....	23
Costs, Basic Utility.....	10
Consumption, Basic Utility.....	10
Crop Acresage and Total Yields.....	7
D	
Data, Boiler Room.....	9
Data, Engineering.....	8
Data, Institutional Laundry.....	7
Dogs, Guide - from 1929-1939.....	26
Duration of Visit of Those Remaining.....	18
Duration of Visit of Those Discharged.....	19
E	
Efficiency of Farm Production.....	5
Engineering Data.....	8
Engineer's Report - Boiler Room Data.....	9
Employees on Payroll in State Institutions.....	24
F	
Farm Production, Efficiency of.....	5
Food Consumption, Analysis of.....	4
G	
Guide Dogs from 1929-1939.....	26
H	
Hospital Service, Analysis of.....	11
I	
Institutional Laundry Data.....	7
Institutions, Number of Employees on Payroll in State.....	24
Institutions, Statement of Costs of Operating State-Owned.....	23
L	
Laundry Data.....	7
M	
Marital Condition of County Home Population.....	18
N	
Nativity, Race and Sex of County Home Population.....	17
Number of Employees on Payroll in State Institutions.....	24
O	
Operating State-Owned Institutions, Statement of Costs of.....	23
P	
Patient or Inmate Employment - Acresage.....	5
Population in County Home.....	17
Previous Residence of County Home Population.....	18
R	
Race of Children Under Care.....	16
Register of Blind by County.....	26
Religion of County Home Population.....	18
S	
Stand Concessions Supervised by Council.....	26
Statement of Costs of Operating State-Owned Institutions.....	23
T	
Total Yields and Crop Acresage.....	7
W	
Whereabouts of Children Under Care.....	15
